Reading: Duality Notes

ISE 3200 Linear Optimization - Week 6: Duality

Primal-dual table for converting any LP. Work each example yourself before reading the solution, and check your model against the checklist at the end of this note: units on every variable, the sense of the objective, the direction of each inequality, and non-negativity.

Proof sketch of weak duality and an economic interpretation of y. Work each example yourself before reading the solution, and check your model against the checklist at the end of this note: units on every variable, the sense of the objective, the direction of each inequality, and non-negativity.
