Reading: Simplex Worked Example

ISE 3200 Linear Optimization - Week 4: The Simplex Method I

A full three-tableau example with every row operation shown. Work each example yourself before reading the solution, and check your model against the checklist at the end of this note: units on every variable, the sense of the objective, the direction of each inequality, and non-negativity.

Margin notes on the ratio test and on reading the final tableau. Work each example yourself before reading the solution, and check your model against the checklist at the end of this note: units on every variable, the sense of the objective, the direction of each inequality, and non-negativity.
