Lecture 4: The Simplex Method I

Week 4: The Simplex Method I

ISE 3200 - Linear Optimization

The tableau

- Basic and non-basic variables
- z-row: $z - c\,x = 0$

Pivot rules

- Entering: most negative z-row coefficient (max problem)
- Leaving: minimum ratio over positive column entries

Pivoting

- Scale the pivot row
- Eliminate the column from every other row, including z
