Lecture 5: The Simplex Method II

Week 5: The Simplex Method II

ISE 3200 - Linear Optimization

Optimality

- Stop when every z-row coefficient is >= 0
- Read basic values from the RHS column

Degeneracy

- A basic variable equal to 0
- Ties in the ratio test; possible cycling

Two-phase method

- Phase I: minimise artificial variables
- Phase II: original objective from a feasible basis
