Priya Shah VIBE 101 "The Bug Hunt"

Issue 1 (security): In `add_user`, the SQL is built with string concatenation so a name like `'); DROP TABLE users;--` could destroy data. Fix: parameterized query.
Issue 2 (security): Password is stored as plain text. Use bcrypt.
Issue 3 (correctness): `roles=[]` is a mutable default argument, so roles accumulate across calls.
Issue 4 (style): `except: pass` is bad.
Issue 5 (security): API key is hard-coded.
Issue 6 (correctness): `average_age` will divide by zero.
